F. Report		
1. Health assessment report	✓	✓
2. Laboratory test report	✓	✓
3. Other special examination reports: Ultrasound scan, X-ray examination, ECG.	✓	✓

The health check will be conducted in three parts.

1. On the day of Nurse's Consultation, the following will be performed:
 - Basic health measurements;
 - Blood tests. Please keep fasted (no food or drink except clear water) for at least 6-8 hours before blood taking;
 - Urinalysis.
2. Special examinations: Chest X-ray, resting ECG, breast ultrasound scan, mammography or bone mineral density measurement (DEXA scan) will be performed at designated diagnostic centre, and can be arranged to happen on the same day of Nurse's consultation.
3. On the day of Doctor's Consultation, the following will be performed:
 - Health assessment by doctor;
 - Examination of the woman including ultrasound scan of the pelvis;
 - Cervical smear (Pap smear) test;
 - Explanation of all test reports;
 - Doctor's advice.

* The mammography is a 2D examination, and can be upgraded to 3D with an additional charge (\$1,750).
